

Hein Zarni Aung

heinzarniaung.dev@gmail.com | linkedin.com/in/heaung | github.com/LoistCloist

EDUCATION

Stony Brook University

B.S., Computer Science + Applied Math & Statistics (Data Science) | GPA: 3.40

Honors & Scholarships: Global Excellence Scholarship

Relevant Coursework: Algorithms, Systems Fundamentals I & II, Software Security

Expected Graduation: May 2027

INTERNSHIPS

Software Engineering Intern — Clustr

Cross-platform React Native social/scheduling app | ~8-person dev team

- Built server-side community infrastructure using Firebase Cloud Functions, including CRUD operations for communities, posts, and comments with enforced ban/edit permissions to prevent client-side database tampering, plus join/leave workflows and activity feed endpoints.
- Implemented secure authentication features, including a password reset flow (client screen plus backend cloud function) and custom claims to drive new-user onboarding logic.

Jan 2026 - Sept 2026 (expected)

Software Engineering Intern — Prenora Dynamics LLC

~8-person team

- Own end-to-end design decisions for an in-house, in-platform video chat feature, tasked with researching and evaluating available SDKs/approaches to replace reliance on third-party platforms (e.g., Zoom, Google Meet).
- Set up the PostgreSQL/Supabase database and backend data models for Jamory, an in-house app connecting students with music tutors, and built a seed-data workflow to streamline debugging and local development.

Jun 2026 - Sept 2026 (expected)

PROJECTS

TuneAcademy

Python, FastAPI, Docker, GCP, GitHub Actions

- Built the AI/audio-analysis pipeline for an app matching music students with instructors based on specific technical weaknesses, using Essentia and NumPy to extract pitch, rhythm, and tone features from recorded performances.
- Set up a CI/CD pipeline using GitHub Actions to lint and test the codebase, then auto-build and deploy the app to Cloudflare Workers.
- Built and deployed backend APIs and services in Python/FastAPI, containerized with Docker, using Cloud Firestore and GCP hosting.

Diary Handwriting Analysis

Python, PyTorch, Hugging Face Transformers, OpenCV

- Fine-tuned Microsoft's TrOCR handwriting recognition model with a custom OpenCV line-segmentation preprocessing pipeline (grayscale conversion, binary thresholding, horizontal ink-projection profiling), reaching ~87% reliable page transcription on personal diary pages.
- Pivoted to DANIEL, a segmentation-free architecture that transcribes full pages directly and jointly extracts named entities, to enable topic and mood-trend statistics across diary entries over time; currently in progress.

RESEARCH

Undergraduate Research Assistant — Ethos Lab, Dept. of Computer Science, Stony Brook University

Sep 2025 - Dec 2025

PI: Abisheka Pitumpe | Team: 2

- Built a Python/Selenium automation pipeline to monitor newly issued SSL/TLS certificates in real time, using keyword- and heuristic-based detection logic to triage hundreds of candidate domains for potential fraud.

CAMPUS INVOLVEMENT

Teaching Assistant - Data Structures & Algorithms, Dept. of Computer Science, Stony Brook University

Aug 2025 - Dec 2025

- Supported a 240-student Data Structures & Algorithms course through weekly office hours and recitations, guiding students through asymptotic analysis, recursion, and core data structures (linked lists, trees, heaps, hash tables, graphs).
- Created original review materials from scratch for midterm exam preparation; materials were adopted as the basis for subsequent semesters' review sessions.

SKILLS

Languages: Python, Java, JavaScript, TypeScript, C

Backend: FastAPI, Express.js, Node.js

Frontend: React, React Native, Next.js

Databases & Cloud: PostgreSQL, MongoDB, Firebase/Firestore, AWS, GCP

Tools: Git, Docker, Linux, Selenium
