Cover Letter

Dear Hiring Team,

I am applying for a remote Software Developer Intern position that you have posted on Handshake. My experience spans full-stack development and software security, which directly aligns with your internship's focus areas. Currently, I am developing a social-media application alongside other students and competing to secure some funding. This project has strengthened my skills in building scalable, user-centered systems from the ground up using React Native, Typescript, and Firebase.

Last semester, I worked with Ethos Lab at Stony Brook on a cybersecurity initiative to automatically detect and block phishing links impersonating toll-payment sites immediately upon creation. This research gave me firsthand experience into how vulnerable populations, especially elderly users, can be exploited by digital threats. I believe understanding these security considerations is crucial in healthcare technology.

Beyond technical skills, I also bring strong collaboration skills developed through leadership and mentorship. As Treasurer of Stony Brook's Game Development Club, I manage funding and serve as the liaison with student government, and I currently mentor seven international students adjusting to college life in America. These roles have strengthened my ability to communicate effectively across diverse teams and reinforced my passion for work that makes a tangible difference.

Sincerely,

Hein Zarni Aung
