Cover Letter

Dear Hiring Team,

I am excited to apply for the Software Engineering Internship at Nutanix. As a junior at Stony Brook University double majoring in Computer Science and Applied Mathematics & Statistics, I've developed a strong foundation in systems fundamentals, data structures, and algorithms. Through my role as a Teaching Assistant for Data Structures & Algorithms, I've guided 30+ students in mastering recursion, graph traversal, and complexity analysis in Java, sharpening my technical communication and problem-solving skills in the process. Beyond academics, I built a Discord Voice Channel Activity Monitor using Node.js, Discord.js, and PM2 cloud deployment, applying distributed system principles for real-time monitoring and performance reliability.

I'm drawn to Nutanix's innovative work in distributed systems, software-defined infrastructure, and multi-cloud solutions. The chance to collaborate with world-class engineers while expanding my technical depth in areas like virtualization and performance optimization aligns perfectly with my academic background and passion for scalable systems. I'm eager to bring my curiosity, persistence, and systems-oriented mindset to Nutanix's mission of redefining enterprise computing.

Thank you for your time and consideration.

Sincerely,

Hein Zarni Aung
