## Cover Letter

---

Dear Hiring Manager,

I am excited to apply for the Software Engineering Intern position at Texas Instruments. As a double major in Computer Science and Applied Mathematics & Statistics at Stony Brook, I have developed strong technical and problem-solving skills through coursework and hands-on projects. My experience as a Teaching Assistant for Data Structures & Algorithms has also strengthened my ability to clearly explain complex concepts and collaborate effectively in team settings.

Beyond academics, I serve as Treasurer of the Game Development & Design Club and as an International Peer Mentor, roles that have enhanced my leadership, communication, and time management skills. I have also completed projects such as a Discord Voice Channel Activity Monitor and a personal productivity app, which required applying languages like C, Python, and Java, as well as working across the full software development lifecycle.

I am eager to contribute these skills to TI's mission of designing innovative embedded software and development tools. I would welcome the opportunity to bring my technical background and collaborative mindset to your engineering team, and I look forward to the chance to discuss how I can support TI's continued success.

Sincerely,

**Hein Zarni Aung**
