Cover Letter

Dear Hiring Manager,

I am excited to apply for the Software Engineer Intern position at North Atlantic Industries. As a junior at Stony Brook University pursuing a double major in Computer Science and Applied Mathematics & Statistics, I have developed strong programming skills through both academic and hands-on experience. As a Teaching Assistant for Data Structures & Algorithms, I guided 30+ students in mastering recursion, trees, heaps, and graphs, reinforcing my own expertise in algorithm design and debugging. Beyond the classroom, I contributed to the Game Development & Design Club by helping build a Mario-style platformer in Godot and developed a cloud-hosted Node.js/Discord.js bot with real-time monitoring, JSON-based configuration, and PM2 deployment. These projects strengthened my foundation in C, Java, Python, and JavaScript, while sharpening my ability to design reliable, user-facing applications.

I also bring experience working with **ESP32 microcontrollers**, where I explored hardware-software integration, real-time signal handling, and communication protocols. These projects deepened my understanding of embedded systems and exposed me to debugging challenges similar to those faced in rugged electronics development. Combined with my familiarity in Linux, Git, and GUI development, I am confident in my ability to contribute to NAI's embedded software initiatives. I am eager to learn from your engineering team and contribute to mission-critical solutions that advance aerospace, defense, and industrial technologies. Thank you for your time and consideration, and I look forward to the opportunity to discuss how my background aligns with NAI's goals.

Thank you for your time and consideration.

Sincerely,

Hein Zarni Aung
