Cover Letter

Dear Hiring Team,

I am writing to express my strong interest in the Software Engineering position at Oracle. As a Computer Science and Data Science double major at Stony Brook University with hands-on experience in distributed systems, cloud deployment, and database management, I am excited about the opportunity to contribute to Oracle's industry-leading cloud solutions and autonomous database technologies. My technical foundation includes proficiency in Java, Python, and scripting languages, combined with practical experience in data structures, algorithms, and distributed systems through coursework and real-world projects. My Discord Voice Channel Activity Monitor demonstrates my ability to design and deploy scalable systems—I built a Node.js application with MongoDB persistence and PM2 deployment on a cloud server, implementing real-time monitoring with customizable configurations across multiple servers, which required careful consideration of distributed system principles and data persistence strategies.

My research experience at the Ethos Lab has strengthened my software engineering capabilities, particularly in developing fraud detection algorithms for EZ-Pass systems and automating testing workflows using Selenium and Python. This work has given me valuable experience in debugging complex systems, analyzing vulnerabilities, and ensuring software reliability—skills that align well with Oracle's focus on developing, debugging, and designing robust software applications. Additionally, my role as a Teaching Assistant for Data Structures & Algorithms has deepened my understanding of fundamental computer science concepts while developing my ability to provide technical leadership and mentorship. My familiarity with SQL, PostgreSQL, MongoDB, and NoSQL systems, combined with experience using AWS and understanding networking protocols through my Systems Fundamentals coursework, positions me to contribute effectively to Oracle's cloud services and distributed systems.

I am particularly drawn to Oracle's commitment to innovation and its role in building industry-defining technologies. My portfolio at github.com/LoistCloist showcases my technical capabilities and passion for building scalable solutions. I would welcome the opportunity to discuss how my skills in distributed systems, cloud technologies, and software development can contribute to Oracle's continued success. Thank you for considering my application.

Thank you for your time and consideration.

Sincerely,

Hein Zarni Aung
